

GET AN UPPER EXTREMITY PROSTHETIC EXPERT ON YOUR TEAM WITHOUT MORTGAGING YOUR PRACTICE.

biodesigns, inc. introduces the next evolution in clinical consulting: the Remote Consulting System (RCS).

With our innovative, interactive video consulting technology, expert Upper Extremity assistance is quickly and readily available - at less than half the cost you'd typically pay for a prosthetic consultant to come to your office.

No need to refer those complex UE patients away or rely only on in-person consultation. With the RCS, you now have a choice. You decide the level of personalized service you need: we are happy to provide you with direct, hands-on care, or you can use our remote consulting technology and see just how beneficial, efficient and cost-effective it can be for your practice.

RCS doesn't require first-class treatment. No need for business class travel, 5-star hotels, and 3-course meals. RCS doesn't require much. It's perfectly satisfied spending the night in a 1'x1' box or cruising in the cargo hold.

RCS wants you to be in control. It will "look over your shoulder" and guide you as you personally work with your patient. It will help advance your clinical knowledge and skill set and increase the likelihood of improved clinical outcomes; all without threatening your valuable patient relationship.

RCS doesn't mind being away from home. It is virtually available whenever and wherever you need it. ...arriving refreshed and ready to work, again and again and again. You no longer need to minimize the assistance you receive. RCS is happy to be available at multiple stages of your patient's rehabilitation allowing you to maximize your success...affordably.

RCS is well-connected and loves to make new friends. While RCS is the perfect solo act, it offers even greater capability than one-on-one consulting can provide. RCS allows simultaneous collaboration with an entire team of consultants, from doctor to therapist to payer and more.

Call today to find out how our Remote Consulting System can help you with your Upper Extremity needs.

biodesigns specializes in Upper Extremity Prosthetic consulting (remote, in-person and concierge services), high-performance interface designs, innovative product development, and adaptive fitness for all levels of limb loss/absence or involvement.

Randall Alley, CEO of biodesigns, inc., has specialized in upper extremity prosthetics for nearly 15 years. He is the cofounder and former director of Hanger's Upper Extremity Prosthetics Program, Chair of the Upper Limb Prosthetic Society, certified by the International Sport Sciences Association and a member of the National Athletic Trainer's Association. He is the designer of the ACCI and XFrame upper extremity interfaces and has consulted on the design and development of several commercially available prosthetic products.
