

Patients See
the freedom to go exploring

You See
a liner that allows for easy
flexing of the knee and
controls pistoning

Alpha® Silicone Liners

Through a combination of a flexible panel fabric and a one-way stretch fabric that controls pistoning, it's an entirely new way for Alpha Liners to surround and protect residual limbs. And it's the result of our constant pursuit of improved prosthetic products—expanding the range of knee motion without pulling or tugging on the knee or residual limb.

**So you see a satisfied patient.
And they see a satisfying, active future.**
