

# BOLD

New

## OTS Ligament Knee Brace

### Formable Polymer Thigh and Tibia Cuffs

The semi-malleable upper and lower cuffs conform intimately to the leg -- achieving enhanced support and patient comfort.

### Embossed Aircraft Aluminum Superstructure

Embossed rigid shells substantially increase the BOLD's structural integrity for contact sports and active patients.

### Suspension Technology

In concert with the hinge mechanics, Townsend's patented Synergistic Suspension Strap prevents brace migration and enhances patient satisfaction. Strategic attachment and angulation of the strap creates circumferential compression and utilizes the calf muscle group as a natural shelf.

Featuring Townsend Motion Hinges and patented anti-migration technology.
