Townsend Design's Reliever Series provides a diverse selection of OA bracing solutions to help you address the physical characteristics and life-style of any OA patient.

Any size, any shape – ANY mobility-challenged patient with unicompartment osteoarthritis.

Do you want maximum unloading? Or are comfort and compliance important criteria? Will the patient's leg size and/or shape require a custom brace? Or should you order a "customized" OTS brace (individually made from three leg measurements at no additional charge) that will fit a leg that isn't symmetrical?

Townsend Design and its customers have a proven track record of bracing nearly 100,000 OA patients. We have the options, patented technology and orthotist-inspired fabrication processes to help you achieve the highest levels of patient satisfaction and compliance. Single or dual hinge braces. Guaranteed fit. Adjustable corrective force. The best hinge/knee tracking. Superior brace suspension.

For additional information, please speak with your Townsend Design representative or download information and order forms from our web site. To discuss the ideal bracing options for a specific patient, please call **800.432.3466**.
