

Ultra low profile

Introducing the TM5: The next generation of our Townsend Motion Hinge

Premier

For 20 years, our patented hinge motion has produced superior clinical outcomes and enhanced patient compliance.

Like Townsend's existing roll and glide hinge designs, the TM5 ensures the shells of the brace remain in total contact with the leg throughout range of motion. No gapping. No pistoning. No migration.

It's smaller, stronger and now available on Townsend Premier Series and traditional full shell custom functional and OA braces.

To request updated product literature and order forms that include Townsend's new TM5 hinge, please call 800-840-2722. We also invite you to visit our web site:

www.townsenddesign.com

See the new TM5 hinge and updates to our Premier Series KAFOs and AFOs at the national O&P meeting in Reno this October. (Exhibit Booth #327)
