

93% Agree! * Cadlow™ Shoulder Stabilizer Reduces Subluxations & Dislocations

In a recent survey, 93% of user respondents confirm that Cadlow significantly reduces the number of shoulder subluxations and dislocations when worn during athletic activity. Cadlow alleviates the fear of pain or re-injury by providing glenohumeral stability while maintaining full ROM. This dynamic shoulder stabilizing brace also provides pre- and post-op strengthening.

The Cadlow system includes compression shorts, harness and progressive resistance tubing.

***IMPROVED DESIGN—Now takes less than 15 minutes to fit your patient
LOWER COST—Now there is no reason to keep them out of the game***

Call or e-mail for free CD that shows athletes using Cadlow™ and a step-by-step fitting video.

*According to user respondents in a recent survey. Survey results available upon request.
