

You asked for it!

...and we're listening!

You've been asking for a Ferrier Coupler with an inverted pyramid built right in, so we created one. The new Model P5 from Ferrier Coupler has the male portion of the

inverted titanium pyramid built into the male portion of the Coupler, saving both weight and construction time. Now you have even more options for providing your patients with a quick disconnect.

Recommended
L-Code 5617

We're also hard-coating all of our aluminum Couplers for enhanced durability and superb resistance to the elements.

Another great component from Ferrier Coupler: The Trowbridge

Terra-Round accessory foot. This 15-ounce, water-resistant unit provides a 3½-inch diameter base with a center stem that flexes in any direction to firmly grip uneven terrain.
