

# Dobbs Dynamic Clubfoot Bar

Stock Number: 270 AJP 8-14

**Dr. Matthew Dobbs, M.D.**, a pediatric orthopedic surgeon at St. Louis Children's Hospital, has invented a new dynamic clubfoot brace, patented as the **"Dobbs Bar"**.

The Dobbs Bar lets children move and kick their legs independently, which gives them new found freedom when it comes to crawling and being more active.

Children fuss less and sleep better in the Dobbs Bar because it's more comfortable and less restrictive. The independent movement prevents heel ulcers and keeps the kids from pulling out of their boots. The results are happier kids, happier parents and improved compliance.

## Benefits

- Children can kick and move their legs independently so they can crawl and be more active.
- No more blisters and red spots on the back of the heels, because the brace moves with the child, friction on the heel is greatly reduced.
- The independent movement and greater mobility of the brace prevents the kids from escaping and pulling out of their boots.
- Children sleep better in the Dobbs Bar because they can get comfortable.
- Children can sleep with one leg straight and the other bent which reduces stress on the child's knees.
- The Dobbs Bar attaches to our Open-Toe Boots and is completely adjustable from 8 to 14 inches to allow for growth.

### Suggested Billing Codes:

Dobbs Bar - L2300

Markell Open-Toe Boots - L3204

Available From:

# MARKELL

M.J. Markell Shoe Co., Inc. 504 Saw Mill River Rd. Yonkers, NY 10701
