

New M4D Scan

Not only a 3D Scanner!

Portable and quick to set up

Its small size makes it easily portable from one place to another.
In less than 5 minutes, it is installed and ready to scan in any kind of environment.

Accurate and constant

The scanner offers an optimal precision for every body part, in addition to tolerating slight movements from the patient.

Versatile

It is possible to scan any body part, from head to toes, while providing a comfortable, clean and fast solution for both the patient and the clinician.

Fast acquisition

It takes only 40 seconds to scan a foot, a torso or a leg without post-treatment.
